

# Wild Rivers Invasive Species Coalition

A cooperative partnership managing invasive species in Dickinson, Menominee (MI), Florence, Forest, and Marinette Counties (WI)

## Trail Monitoring Volunteer

When conducting a trail survey your primary goal will be to record invasive species location using a GPS and WRISCs Volunteer Mapping Form, which will be provided or found on our website ([www.wrisc.org](http://www.wrisc.org)). You will also record the estimated density and area on this form, in addition to any other notes.

WRISC will use the information recorded and report it to an online database called the Midwest Invasive Species Information Network (MISIN). The MISIN app and website have great descriptions in helping identify the invasive species you will be looking for.

*\* It is highly recommended that the MISIN app be downloaded to help assist in monitoring.*

### What You Will Need

- GPS (can be supplied by WRISC if needed)
- Volunteer Mapping Form
- Clipboard
- Pen
- MISIN

### WRISC Priority Species:

- Garlic Mustard
- Japanese Knotweed
- Non-Native Phragmites
- Wild Parsnip
- Woody invasives

*\*Not limited to these invasive species, please see attached invasive species list and their priority*

Please return all tools and datasheets/photos/samples to WRISC office at 420 N. Hooper St. Kingsford, MI 49802.

Do not hesitate to contact us with any questions!

We are excited to have you join our volunteer team!
